SUBUNIT: There are six type IV collagen isoforms, alpha 1(IV)-
alpha 6(IV), each of which can form a triple helix structure with
2 other chains to generate type IV collagen network.
DOMAIN: Alpha chains of type IV collagen have a noncollagenous
domain (INC1) at their C-terminus, frequent interruptions of the G-
X-Y repeats in the long central triple-helical domain (which may
cause flexibility in the triple helix), and a short N-terminal
triple-helical 75 domain.
                                                                                                                                                                                                                                                                                                                                                                                                                     괊

It is produced through a collaboration between the Swiss Institute of Bioinformatics and the EMBL outstation the European Bioinformatics Institute. There are no restrictions on its use as long as its content is in no way modified and this statement is not
PTM: Prolines at the third position of the tripeptide repeating unit (G-X-Y) are hydroxylated in some or all of the chains. PTM: Type IV collagens contain numerous cysteine residues which are involved in inter- and intramolecular disulfide bonding. 12 of these, located in the NCI domain, are conserved in all known type IV collagens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       -!- SIMILARITY: Belongs to the type IV collagen family.

- :- FUNCTION: The muscarinic acetylcholine receptor mediates various

- :- FUNCTION: The muscarinic acetylcholine receptor mediates various

- :- FUNCTION: The muscarinic acetylcholine receptor mediates various

- callular responses, including inhibition of adenylate cyclase,

breakdown of phosphoinositides and modulation of potassium

- callular tesponses, including inhibition of potassium

- callular Location of Proteins. Primary transducing

- submitted (Ny similarity).

- subcellular Location: Integral membrane protein (By similarity).

- submitted (RAH91711.1) -; mRNA.

- in SIMILARITY: Belongs to the G-protein coupled receptor 1 family.

R. "Generation and initial analysis of more than 15,000 full-length human and mouse cDNA sermences."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Zhao J., Bennet C.L., Stewart G.J., Frommer M., Raphael K.A.;
Submitted (NOV-2002) to the EMBL/GenBank/DDBJ databases.
-!- SUBCELLULAR LOCATION: Integral membrane protein (By similarity).
-!- SIMILARITY: Belongs to the ABC transporter family.
EMBL, AX172185; AAO65145.1; -; Genomic_DNA.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            hydroxyapatite.

PTM: Proline residues at the third position of the tripeptide repeating unit (G-X-Y) are hydroxylated in some or all of the chains. Pro-726 is the only 3-hydroxypro and the only hydroxylated proline in position X.

PTM: 0-linked glycan consists of a Glc-Gal disaccharide bound to the oxygen atom of a post-translationally added hydroxyl group. MISCELLANEOUS: The complete chain contains 1052 residues. SIMILARITY: Belongs to the fibrillar collagen family.
                                                                                                                                                                                                                                                                                                                                                            Gaps

"Nucleotide sequence of a cDNA clone for mouse pro alpha 1(I) collagen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         hydroxyapatite.
-!- PTM: Prolines at the third position of the tripeptide repeating unit (G-X-Y) are hydroxylated in some or all of the chains.
-!- SIMILARITY: Belongs to the fibrillar collagen family.
-!- SIMILARITY: Contains 1 VWFC domain.
-!- CAUTION: Ref.3 sequence differs from that shown due to erroneous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   NUCLEOTIDE SEQUENCE OF 1-25.

Biochem. Biophys. 384:37-46(2000).

-!- FUNCTION: Type I collagen is a member of group I collagen (fibrillar forming collagen).
-!- SUBUNIT: Trimers of one alpha 2(I) and two alpha 1(I) chains.
-!- SUBUNIT: Trimers of one alpha 2(I) and two alpha 1(I) chains.
-!- PTM: Prolines at the third position of the tripeptide repeating unit (G-X-Y) are hydroxylated in some or all of the chains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Allysine (By similarity).

novel mutations causing autosomal recessive Alport syndrome.";

Am. J. Hum. Genet. 63:1329-1340(1998).

1. FUNCTION: Type IV collagen is the major structural component of glomerular basement membranes (GBM), forming a 'chicken-wire' meshwork together with laminins, proteoglycans and methwork together with laminins, proteoglycans and entactin/nidogen.

2. SUBGNIT: There are six type IV collagen isoforms, alpha 1(IV) - alpha 6(IV), each of which can form a triple helix structure with 2. C ther chains to generate type IV collagen network.

2. Other chains to generate type IV collagen network.

2. Other chains to generate type IV collagen sare colocalized and present only in basement membranes of kidney, eye, coorled, lung and brain.

2. In DOWAIN: Alpha and alpha 4 type IV collagenous domain (NCI) at their C-terminus, frequent interruptions of the G-main in the long central triple-helical domain (which may triple-helical 7% domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           MEDLINE=93054733; PubMed=1429714; Kamagata Y., Mattei M.-G., Ninomiya Y.; Kamagata Y., Mattei M.-G., Ninomiya Y.; Isolation and sequencing of cDNAs and genomic DNAs encoding the alpha 4 chain of basement membrane collagen type IV and assignment of the gene to the distal long arm of human chromosome 2."; J. R SIGNAL
             -i- PTM: Prolines at the inite position of the tripping elegating unit (G-X-Y) are hydroxylated in some or all of the chains.
-i- PTM: Type IV collagens contain numerous cysteine residues which are involved in inter- and intramolecular disulfide bonding. 12 of these, located in the NC1 domain, are conserved in all known type IV collagens.
-i- DISEASE: Defects in COL444 are a cause of autosomal recessive Alport syndrome (AS) [MIM:203780]. As is an hereditary disorder characterized by progressive glomerulonephritis, renal failure, hematuria, ocular abnormalities and deafness. The recessive form occurs equally between males and females.
-i- DISEASE: Defects in COL444 are a cause of familial benign hematuria (FBH) [MIM:141200]; also known as thin basement membrane disease. FBH is characterized by persistent hematuria, an electron microscopically detectable thin glomerular basement membrane (GBM) and an autosomal dominant mode of inheritance. Renal function remains normal. In children, differentiation between FBH and AS can be difficult, because both disorders are manifested by persistent hematuria and thin GBM at that age.
-i- SIMILARITY: Belongs to the type IV collagen family.
-i- SIMILARITY: Contains 2 COL4C (collagen IV C-terminal) domains.
                                                                                                                                                                                                                                                                                                                                                          This Swiss-Prot entry is copyright. Eukaryota, Viridiplantae, Streptophyta, Embryophyta, Tracheophyta,
Spermatophyta, Magnoliophyta, Liliopsida, Poales, Poaceae;
Proc. Natl. Acad. Sci. U.S.A. 88:10079-10083(1991).
-!- FUNCTION: Transcriptional regulator (By similarity).
-!- SUBCELLULAR LOCATION: Nuclear (Probable).
-!- INDUCTION: By PHA/PMA or by serum.
-!- SIMILARITY: Belongs to the EGR C2H2-type zinc-finger protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ..
